FEATURES:

1. Emotion & Sentiment Analysis (ML)

Idea: Automatically detect the user's mood based on what they write or say.

⚙️ Add-ons

Positive / negative / neutral detection

Emotion classification (happy, sad, stressed, etc.)

Mood trend graphs

2. Cause & Trigger Detection(WHY)

Idea: The system identifies what causes certain emotions.

⚙️ Example

"You feel stressed when deadlines are near"

"You are happiest when social activities are mentioned"

"You often feel stressed when deadlines are mentioned"

"You tend to feel happier when social activities appear in your entries"

⚙️ Add-ons

Top 3 stress triggers

Top 3 happiness triggers

“Your mood improved when you mentioned ___”

⚙️ Example

“Top stress trigger: deadlines”

“Top happiness trigger: friends”

“Your mood improves when you mention music”

3. Pattern & Behavior Analysis(HOW)

Idea: Analyze entries over time to detect habits and patterns.

⚙️ Add-ons

Weekly mood trends

Activity correlation

Behavior summaries

⚙️ Examples

“You tend to feel more stressed during weekdays.”

“Your mood improves when you journal consistently.”

“You often feel tired on days with fewer activities recorded.”

“Your weekends show a more relaxed and positive mood pattern.”

“Stress levels increased toward the end of the week.”

“You seem more productive during the first half of the week.”

4. Smart Reminders & Suggestions

Idea: System gives personalized suggestions.

⚙️ Examples

If no entry for 3 days → send reminder

If user usually writes at 9 PM → remind around that time

⚙️ Examples

“You haven’t written in 3 days”

“You seem stressed lately, consider taking a break”

if recent entries are mostly tagged as stressed → show

“You seem stressed lately, consider taking a short break.”

if user writes consistently for 7 days → show

“Great job staying consistent with journaling.”

if sadness appears often → show

“You may want to reflect on what has been affecting your week.”

5. Location-Based Diary

Idea: Attach Labels/Tags(Example: Home, School, Work, Café, Gym, Other)

⚙️ Examples

“You are happiest when at home”

“Stress increases at school/work”

7. Advanced Security & Privacy

Idea: Make the diary ultra-secure.

⚙️ Features

Encryption

Biometric login(If possible only, to be discuss with groupmates)

Fake/decoy password(If possible only, to be discuss with groupmates)

Suspicious access alerts(If possible only, to be discuss with groupmates)

6. Memory Highlight / AI Summary

Idea: System summarizes entries.

⚙️ Examples

“Your week was mostly productive but stressful”

“You felt happiest on Wednesday.”

“Stress increased towards the end of the week.”

Highlight best/worst day

“Your best day was March 14 (happy & relaxed).”

“Your most stressful day was March 12.”

Monthly / Yearly Insights(If possible, to be discuss with groupmates)

Examples:

“You were happiest during December.”

“Most stressful months: March and April.”

“Your mood improved compared to last month.”

7. Tagging & Smart Search

Idea: Make entries searchable intelligently.

⚙️ Features

Tags(manual/automatic(if possible)) (school, stress, happy, etc.)

Smart search (“show all stressful days”)

Users can search like:

“show all stressful days”

“entries about school”

“happy entries this month”

Behind the scenes, this is just:

filtering by tags

filtering by emotion

filtering by date

8. Streak-Based Motivation System

Idea: Encourage consistent journaling through a dynamic streak indicator that evolves as users write daily.

⚙️ Examples

“ 🔥 5-day streak — keep it going!”

“Your streak reached 10 days! The flame is getting stronger!”

“Don’t lose your streak today — write a quick entry.”

Icon changes based on streak:

Small flame → starting streak

Bright flame → consistent user

Glowing/golden flame → long streak

9. Future Prediction (Light ML)

Idea: Prediction + preparation advice + emotional support

⚙️ Examples

“Your recent entries suggest that next week may be demanding. Try preparing your tasks early and leave time to rest.”

“You may have a busy week ahead based on your recent journaling patterns. Stay organized—you’ve handled challenging weeks before.”

“Your recent mood trend looks a bit tense. Consider pacing yourself next week and taking breaks when needed.”

“Your entries suggest a more positive week ahead. Keep up the routines that have been helping you.”

“You may encounter some stressful moments next week, but planning ahead may help you feel more in control.”

IF THERE ARE STILL MORE TIME WE CAN ADD THIS:

11. Mental Health Alert System

Idea: Detect concerning patterns.

⚙️ Examples

5+ consecutive negative entries

high stress frequency over a week

sudden drop in mood trend

⚙️ Examples

“We noticed you’ve been feeling down recently.”

“You’ve had several stressful entries this week.”

“It might help to take a short break or talk to someone you trust.”

“Your recent entries show increased stress. Consider taking time to rest or talk to someone you trust.”

“You’ve been feeling down for several days. Writing more or reaching out to someone may help.”

“We noticed a pattern of low mood. Small steps like rest or reflection can make a difference.”

12. Voice Diary + Emotion Detection

Idea: Users can speak instead of typing.

⚙️ Features

Speech-to-text

Emotion detection from tone (if possible only, to be discuss with groupmates)

If emotion detection from tone is not possible, the flow will be like this:

-User speaks

-App converts speech to text

-System saves audio if needed

-ML analyzes the text content

-Optional: basic tone-based emotion check as a supporting features
